

CHRONIC ILLNESSES DETECTED BY SCHOOL NURSES

These figures come from a sample of 31 nurses new to nursing, hired into rural school districts. Nurses were polled quarterly on the number of cases they observed for the ten most common pediatric illness, and case numbers were summed for the entire 2022-2023 school year.

***Not all nurses participated in all four surveys and student populations changed at each time. This infographic was last updated in November 2023.*
